

Resume of Tony Bondhus

Ideally suited for Product Development

My extensive knowledge of mechanical design and plastic part design, combined with my ability in electronics design and computer programming, make me extremely capable in this area.

I'm at a career change point, due to heavy competition from China in the plastic mold making field. I've spent most of my life designing and building molds, and plastic parts, for the plastic industry. The plastics industry is a field where every mold is a prototype, but even so every mold must work every time. I'm a very wide range of knowledge, which means I rarely find something I can't do.

I do not have extensive university education, but I do not consider that a minus. While others were spending their time on education, I was getting real world work experience.

18 years broad based manufacturing experience including:

- Mechanical Design and Prototyping Experience

- Plastic Part Design Experience.

- Knowledge of Manufacturing Processes

 - Plastic Mold and Part Design and Fabrication Experience

 - My family has reputation as excellent mold makers

 - Special Tools and Fixture Design and Construction

 - Knowledge of PLCs and PLC Programming

- Electronic Design and Prototyping Experience (not a lot, but I can do it)

- Computer Programming (not a lot, but I can do it)

 - C++ and Object Oriented Programming

 - Machine and Assembly Language

 - Web Page Design in HTML and PHP

- Familiar with Computer Software

 - Various Spreadsheet, Word Processing, Database Programs, and others.

 - Mechanical CAD Software (Solidworks, ProE, and others.)

 - Computer Aided Manufacturing.
